Gain experience with imaging clinical decision support (CDS) technology with the Imaging Order Simulation CME activity from the Radiology Support, Communication and Alignment Network (R-SCAN™). The activity offers practical clinical scenarios integrated with the CDS platform ACR Select® and provides guidance about choosing imaging exams best suited for a patient’s given clinical history.

Launched in September 2015, R-SCAN is sponsored by the Transforming Clinical Practice Initiative (TCPi) to help 140,000 clinician practices improve the way they deliver care in their transition to value-based payment models. Visit the R-SCAN website to learn how you can join practices around the country forming collaborations to optimize imaging care, reduce unnecessary imaging exams and lower the cost of care.

R-SCAN Participation Benefits:
- Improve ordering practices and avoid low-value imaging with evidence-based recommendations based upon the growing list of R-SCAN Choosing Wisely® topics
- Gain insight about how communication between radiologists and referring clinicians can improve imaging care
- Be prepared to satisfy the impending Protecting Access to Medicare Act requirements by using clinical decision support tools and consulting the ACR Appropriateness Criteria®
- Fulfill Improvement Activity requirements under the CMS Merit-based Incentive Payment System (MIPS) and obtain complimentary CME Credit
